

W3C Validation - A New Generation of Websites

If you have an existing "first generation" website it will be starting to show signs of age. The layout and navigation will not meet the standards of recent advancements in design, functionality and accessibility. (W3C Validation)

“My site looks right and works fine - isn't that enough?”

Unfortunately not. Websites are made up entirely of data. So a website doesn't look like anything at all! It only takes on a visual appearance when it is opened in a browser. Different browsers display the same page very differently.

W3C Validation

This is one of the simplest ways to check whether a page is built in accordance with Web standards, and provides one of the most reliable guarantees that future Web platforms will handle it as it was designed. Try it yourself. Go to <http://validator.w3.org/> type in your website address then click the button for an instant assessment.

Website Upgrades

We can make your current website W3C compliant for a lot less than a brand new site. Contact us for a fixed price.
